Summary

Backend engineer with 4.5 years of experience building Python microservices and REST APIs in fast-paced startup environments. Deep experience with FastAPI, PostgreSQL, and productionizing machine learning pipelines. Comfortable owning services end-to-end, from design through on-call.

Experience

Backend Engineer — Nimbus Analytics (Mar 2022 – Present)

- Designed and shipped RESTful APIs in FastAPI serving 2M+ daily requests, using dependency injection for auth and database session management.
- Owned three production microservices backed by PostgreSQL; wrote extensive unit and integration test suites with pytest, keeping coverage above 90%.
- Built and maintained CI/CD pipelines in GitHub Actions, including automated linting, testing, and blue-green deployment to Kubernetes.
- Partnered with the ML team to productionize two recommendation models, wrapping them in FastAPI inference services and adding monitoring for drift and latency.
- Participated in a weekly on-call rotation and led incident postmortems for the platform team.

Software Engineer — Fieldstone Software (Jul 2020 – Feb 2022)

- Developed internal tooling and Django-based admin services for a logistics platform.
- Migrated a legacy monolith's data layer to PostgreSQL, improving query performance by 35%.
- Introduced Docker-based local development environments, cutting new-engineer onboarding time from two days to two hours.
- Used Git-based feature branch workflows with mandatory code review for all merges.

Key Achievements

- Reduced API p95 latency by 40% by introducing Redis caching for high-traffic endpoints.
- Mentored two junior engineers, both promoted within a year.

Education

B.S. Computer Science, University of California, Davis, 2020

Skills

Python, FastAPI, Django, PostgreSQL, Docker, Kubernetes, Redis, Kafka, Git, CI/CD (GitHub Actions), pytest, MLOps, REST API design, cross-functional collaboration, mentoring
